

ATTENTION: PARENTS, TEACHERS, STUDENTS AND BUILDING OCCUPANTS OF
THE HAMPTON PUBLIC SCHOOLS

SUBJECT: ASBESTOS INSPECTIONS AND ASBESTOS MANAGEMENT PLAN

We are required by EPA regulations to make you aware of asbestos management activities in the Hampton Public Schools.

In June 1989 a complete inspection was made of the buildings by an accredited asbestos inspection consulting firm. The purpose of the inspection was to identify and record the condition of all asbestos containing building materials.

In conjunction with the June 1989 inspection an Asbestos Management Plan was prepared. This plan outlines appropriate actions to manage the asbestos containing building materials in a manner which protects health and environment.

One of the management actions is to perform a surveillance inspection of the building every six months. These inspections are being accomplished in May and December of each year. The latest surveillance inspection was December, 2000.

Another management action is to have formal reinspections accomplished every three years by an accredited inspector/management planner. The last inspection was conducted in July 2009.

Since the Management Plan was prepared, there have been several asbestos abatement projects. For Marston and Centre School buildings the last project was performed in the summer of 2001 for the removal of Mastic/VAT and at Hampton Academy removal of Mastic/VAT was performed in the summer of 2002.

As a result of these projects all identified asbestos-containing materials have been removed from the buildings. Accordingly, there is no need for continuing the management actions outlined above in this letter.

The Asbestos Management Plans are available for public inspection. If you would like to review the plan or if you have any questions on asbestos materials in the Facilities Manager at 926-8708.

Sincerely yours,

Keith Lessard
Facilities Manager
Hampton School District
